NOF Expands Production Capacity for Activated PEG

NOF CORPORATION DDS Development Division today announced that completion of expansion and starting operation for new cGMP qualified facility of activated PEGs. The capacity is now three times more than that before.

In addition, NOF moves forward separate feasibility study for the activated PEG production to meet multi-tons of demand from customers in late clinical stages.

NOF owns patents for high-purity mPEG-OHs as essential starting materials of the activated PEGs and Branched PEGs with molecular weights range from 2 kDa to 80 kDa, equipped with production capacity of mPEG-OHs more than dozens of tons per year.

NOF Director and General Manager of DDS Development Division, Mr. Akiharu Kobayashi said, "We are very happy to serve any requirement of our customers with our expanded capacity in mPEG alcohol and activated PEGs.

We have established our global sales network in USA, EU and Asia. Our scientists visit many prestigious pharmaceutical companies to exchange information from early stage to assist their drug development. We have great experience and proven achievements in drugs on the market so that several tens of pharmaceutical companies audited our facilities and rated as top class.

As top supplier of mPEG-OHs and activated PEGs, we commit ourselves to contributing our customer's success and improving Quality of Life for people in the world."
