Abstract

- Ionizable lipids are known to present varying degrees of immunotoxicity. Understanding the role of key cellular mediators such as the NLRP3 inflammasome in this context will be key to developing the next generation of safe, well tolerated non-viral delivery systems.
- We developed a series of bio-degradable lipids that are rationally engineered to elicit specific immune responses.
- Applications of these lipids to create precision mRNA therapeutics and vaccines will be presented.

NOF CORPORATION invites attendees to visit booth #8 to explore our innovative drug delivery solutions and engage with their experts.
